## UVISION Evaluation Request

UVISION is proud to announce our operating room specialty evaluations. We would like to show you how using UVISION Surgical Class Optik can improve your operating experience and be cost effective as well. Our Surgical Class Optik's are lightweight with an anti-fog coating that is reusable up-to thirty procedures.

UVISION's operating room specialty evaluation requests the participation of an entire operating room specialty within your organization. Key members that are actively involved in the operating room or medical procedures that require protective lenses will receive two pairs of eyewear to evaluate for thirty procedures or 2 weeks. Upon the completion of the evaluation UVISION will show the cost feature benefits of implementing UVISION as your new standard of excellence.

Your evaluation feedback is essential to the advancement of UVISION and development of new products. Our goal is to create a product that makes life for medical professionals easier and more efficient. We look forward to working with you and hope to show you the benefits of UVISION Surgical Class Optik.

UVISION products are designed and manufactured in Germany using the same rigorous standards of excellence that have made German quality and performance the gold standard. At UVISION we're constantly pushing the envelope, searching for ways to improve what are already the most technologically advanced products in its category. Surgical Class Optik is the most recent example of our efforts. We will continue to provide the best possible products for you.

To request an evaluation, contact UVISION directly at 877-357-1801 or on the web at [www.uvision.com](http://www.uvision.com).
