## UVISION New Surgical Class Optik

Surgical Class Optik is the result of extensive research and engineering with the needs of surgical nurses and physicians in mind. The end product provides truly innovative advancements in lens technology. Advanced optics means minimal distortion or halo resulting in improved visualization and concentration. The enhanced optical clarity delivers a dramatic reduction in glare and eye fatigue. Surgical Class Optik offers unparalleled performance with proprietary anti-fog coatings, which assure lasting clear vision. In addition to the coatings surgical class optics offers lightweight design and superior no-slip comfort.

“This product fills a void in the market by providing eyewear which enhances safety through its high quality distortion free optics, comfortable design and best of all by eliminating fogging concerns.”

Lenard Hatfield-BS, RN, CNOR, CMLSO  
Director of Surgical Services and Consultant  
L.J Hatfield Consulting LLC

UVISION products are designed and manufactured in Germany using the same rigorous standards of excellence that have made German quality and performance the gold standard. At UVISION we're constantly pushing the envelope, searching for ways to improve what are already the most technologically advanced products in the category. Surgical Class Optik is the most recent example of our efforts. We will continue to provide the best possible products for you.
